Executive Summary

E-NNOVATE 2026 brought together inventors, universities, research institutions, schools, companies and partner organisations through a hybrid international format. The event combined online innovation presentations, virtual visibility, jury evaluation and an on-site gathering in Krakow, creating a practical bridge between scientific creativity, applied technology and international recognition. This report brings together Online Phase 1, the Krakow on-site event and Online Phase 2, held on 28-29 September 2026, in one consolidated account of the 2026 edition.

Across the full 2026 programme, the event received 129 innovation entries from 17 countries. Poland formed the largest national group with 42 innovations, followed by Malaysia with 17, Thailand and Vietnam with 10 each, Iran with 8, Romania with 7 and India with 6. The combined portfolio reflects participation from universities, research institutions, schools, companies and independent innovators across the official E-NNOVATE category framework.

For our clients and partner organisations, the value of E-NNOVATE 2026 lies in more than the award results. The event provides international exposure, a credible recognition

platform, a structured environment for presenting technologies, and a growing network for future cooperation, commercialisation dialogue and institutional branding.

Event Format and Schedule

The 2026 edition was designed as a flexible international programme, allowing innovators to participate through virtual and traditional formats. This blended model helped reduce travel barriers while preserving the core elements of an innovation fair: presentation, jury interaction, visibility, recognition and follow-up communication.

Programme	Date / Location	Purpose
Online Phase 1	13-17 May 2026	Virtual presentations, jury-facing interactions and online project visibility
On-site	18 May 2026, Hyatt Place Krakow	In-person networking, meetings, selected presentations and partner engagement
Online Phase 2	28-29 September 2026	Additional online presentation opportunity for international innovators

International Participation

The strongest feature of the 2026 edition is its international spread. The participant base combines established research groups, university teams, young innovators, schools, independent inventors and industry-linked organisations. This mix gives clients and partners access to a broad innovation landscape rather than a narrow sector-specific showcase.

Innovation entries by country

E-NNOVATE 2026 | 17 countries | 129 innovations

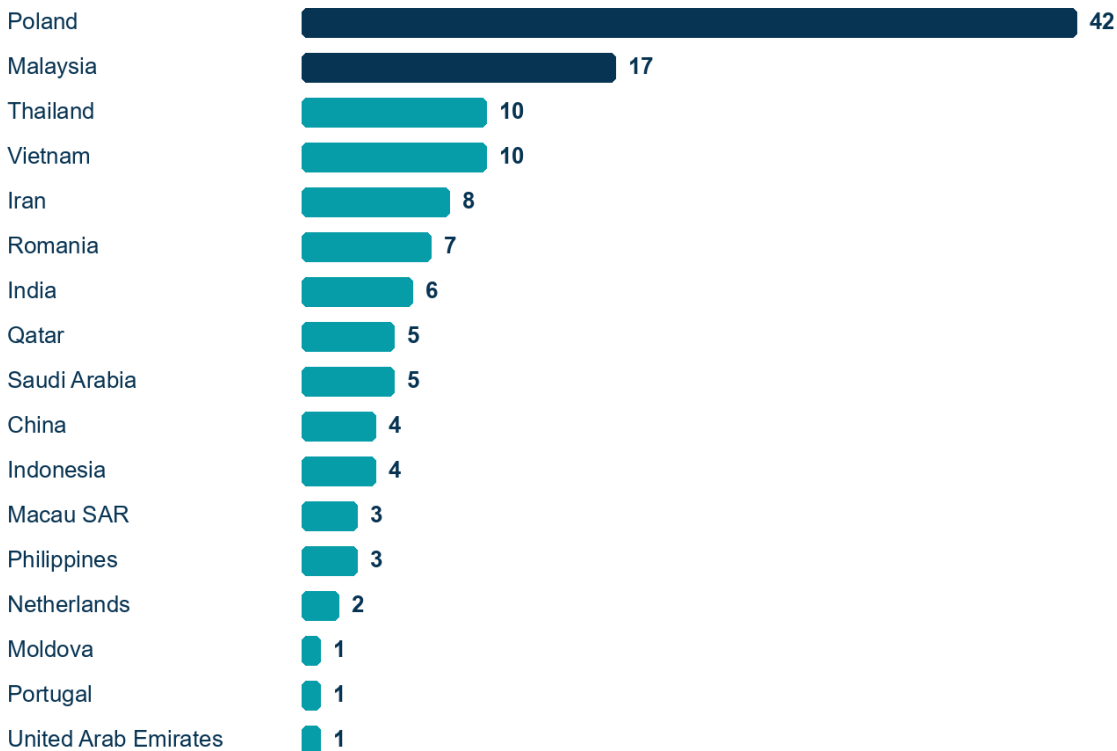

Figure 1. Innovation entries by country.

Innovation Themes and Category Profile

The innovation portfolio spans scientific research, applied engineering, health-related technologies, sustainability and digital transformation. Themes represented include medicine, biotechnology and medical devices; energy; agriculture and aquaculture; environment; healthcare and fitness; nanotechnology, materials and engineering; pharma; transport and logistics; electronics, robotics and IoT; and other applied domains.

This diversity is important from a client perspective. It means E-NNOVATE is not limited to a single discipline; it functions as a cross-sector platform where academic research, school-level innovation, start-up ideas and industrially relevant technologies can be seen together.

Awards and Recognition

E-NNOVATE 2026 recognised innovations through Gold, Silver and Bronze awards, together with additional forms of distinction connected to international participation and overall innovation impact. The medal structure gives participants a visible, credible achievement marker that can be used in institutional communication, media promotion, investor dialogue, portfolio development and future exhibition participation.

E-NNOVATE ADVANTAGE

Value	Advantage
International visibility	Participants are positioned within a global innovation environment rather than a purely local event.
Recognition and credibility	Jury evaluation and award recognition provide a structured proof point for innovators, institutions and partner organisations.
Hybrid access	The combination of online and on-site participation allows wider participation across countries and time zones.
Cross-sector exposure	Healthcare, energy, environment, education, AI, engineering and industry-focused ideas are presented within one platform.
Long-term promotion	The event creates material for certificates, social media communication, institutional news, partner follow-up and future event participation.

Overall Outcome

E-NNOVATE 2026 strengthened its position as an international platform for innovators who want recognition, visibility and access to a wider network. The event successfully presented a multi-country innovation portfolio and created a setting in which research institutions, schools, independent inventors, companies and partner organisations could present ideas with practical relevance.

The strongest outcome is the breadth of participation: the 2026 portfolio brings together innovations from multiple sectors, age groups and institutional backgrounds. This gives the event a clear identity as a place where science, technology, education, sustainability and applied invention meet in a client-friendly and internationally visible format.

Online Phase 2, held on 28-29 September 2026, extended the programme through further online innovation presentations and international participation. Together, the online and on-site activities brought the 2026 portfolio to 129 innovations from 17 countries, supporting continued visibility, recognition, partner communication and follow-up opportunities.

Country-wise Summary Statistics

Country	Entries	Country	Entries
Poland	42	China	4
Malaysia	17	Indonesia	4
Thailand	10	Macau SAR	3
Vietnam	10	Philippines	3
Iran	8	Netherlands	2
Romania	7	Moldova	1
India	6	Portugal	1
Qatar	5	United Arab Emirates	1
Saudi Arabia	5		

IBS GLOBAL thanks all innovators, partners, jury members and supporting organizations for contributing to the continued international growth of E-NNOVATE.
